

## BONA ADHESIVE R848T (ELASTIC SILANE BASED ADHESIVE)

Technical Specifications	
	
Bonding /Curing Time	<ul style="list-style-type: none"> <li>Sanding and Application after 12-24 hours</li> <li>Allows loading after 24 hours</li> </ul>
Adhesion Strength	1.80 N/sq mm
Smell	None
Hazardous Content	None
Rib Stability	Very Good; Can prevent “hollow spots after wood installation”
Packing	600 ml tube (sausage)
Coverage	1 tube (sausage) = 1sqm
Usage	For solid woods, engineered floors, parquets etc.
Price	P 320/tube (sausage)
Other Benefits	<ul style="list-style-type: none"> <li>No water and solvent content that may cause wood expansion</li> <li>High strength for bonding yet slightly elastic to allow natural movement of wood</li> <li>Easy to use</li> </ul>

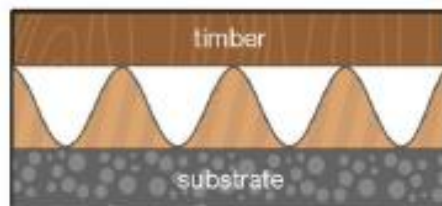

### A. Added Features of Bona Adhesive R848T

The “rib” (adhesive ribs that stand-up from the floor after troweling) is very stable so that even if the subfloor is slightly uneven, it still bonds to the wood floors. This can prevent the “hollow spots” problem after installation.

Adhesive Ribs

### B. Standard Application of Bona Adhesive R848T

Adhesive Ribs

### C. Suggested Applicator: Trowel
